

Application Engineer

Job ID: 0010030

Location: Multiple Locations, India

Posted Date: December 1, 2016

Description:

As an Application Engineer at HABER, you will be the main customer technical contact for product deployment, technical reviews and technical opportunity qualification. Be a product champion and assist sales teams with technical sales and proposals.

Qualifications:

- Bachelors or higher degree in Engineering or related field
- Three or more years of successful product deployment experience in process applications
- Working knowledge of boilers, cooling towers and water treatment systems
- Industry experience in paper, steel or food & beverage a plus
- Experience in an operational or engineering role is highly desirable

About Haber

At HABER, we are solving the challenges of tomorrow, today. We are bringing together the best minds in process, computing and chemistry to develop solutions to address some of the world's toughest challenges – water and energy scarcity and sustainability. Over the past few years there has been an explosion in unstructured data across industry driven by affordable sensing technologies and adoption of analytical instrumentation. This sudden increase in data has resulted in industries spending significant amounts of time collecting, organizing and analysing content and very little time driving value with the data. HABER is focussed on reversing this trend by helping our customers spend less time collecting and analysing data and more time using HABER's platform to drive efficiency, identify issues before they happen and uncover hidden potential.
