- Ability to summarize key points in data using appropriate tools or strategies like reports, graphs, notifications
- Take ownership of the user experience of the products

About Haber

At HABER, we are solving the challenges of tomorrow, today. We are bringing together the best minds in process, computing and chemistry to develop solutions to address some of the world's toughest challenges – water and energy scarcity and sustainability. Over the past few years there has been an explosion in unstructured data across industry driven by affordable sensing technologies and adoption of analytical instrumentation. This sudden increase in data has resulted in industries

spending significant amounts of time collecting, organizing and analysing content and very little time driving value with the data. HABER is focussed on reversing this trend by helping our customers spend less time collecting and analysing data and more time using HABER's platform to drive efficiency, identify issues before they happen and uncover hidden potential.
